B&R has added new compact variants to its series of motor-mounted drives. The new additions to the Acopo-Smotor series facilitate development of modular, adaptive manufacturing. With a full-fledged integrated servo drive, you'll be able to reduce installation costs and save cabinet space.

Additional Acopo-Smotor units are easily added on via daisy-chain cabling thanks to the use of a single hybrid cable.

The new compact Acopo-Smotor units also feature a unique 300° swivel connector, integrated STO safety functionality, up to 1 kW of peak power, IP65 protection and regenerative braking for reduced energy consumption.
