

Dimension reduction at the control cabinet

Categories : [Plant Construction](#), [Engineering & Components](#), [Videos](#)

Date : 25. December 2020

Saving space in the control cabinet is an important issue for control cabinet builders. In times of increasing functionality, more and more products have to be placed in the control cabinet. At the same time, plants and machines have to become more compact and space-saving. Of course, this also applies to the control cabinets that drive the machines. But how can all the necessary products be placed in such a small box? Fortunately, the Complete line from Phoenix Contact offers clever solutions that implement full functionality in the smallest of spaces.
