# Qualitative certification in the field of occupational health and safety

Categories : [Food & Beverage](#), [News](#), [Processing Technologies](#)

Date : 15. October 2021

This month, Dinnissen Process Technology received a new ISO 45001 certification from an independent certification institute. ISO 45001 replaces the previous OHSAS 18001 certification and is the most widely recognized occupational health and safety standard in the world. It demonstrates the company's commitment to occupational health and safety policy, structure and planning. This corporate certification demonstrates that the organization operates in accordance with generally accepted safety procedures and that its employees have the required knowledge and skills.

## The safety and health of employees and visitors is paramount

The company deals with people in all areas of the organization. These can be employees, customers, suppliers, but also visitors. Therefore, it is essential for the organization to ensure the safety and health of all Dinnissen employees. With this in mind, an integrated management system for healthy and safe working has been created and certified according to the ISO 45001:2018 standard. This standard serves as a framework for improving the safety of workers and other stakeholders, reducing risks in the workplace and creating better and safer working conditions. In this way, the system helps the company to combat potential negative impacts. Through the implementation of ISO 45001, Dinnissen focuses on improving working conditions, eliminating hazards, minimizing healthy and safe work (G&SA) risks, taking advantage of G&SA opportunities and addressing G&SA deviations.

## For safe and reliable global food production

The Group is proud that customers, suppliers, partners and employees know they can count on them. The world's largest manufacturers and best brands trust it with their processes and do everything they can to demonstrate that the processes are safe and reliable. That's why the company sets the bar high for itself and its employees. The company strives to be as safe as possible in all areas - for employees, customers, suppliers and visitors alike. After all, when health and safety are optimally guaranteed, employees can deliver the highest quality. In this way, they play a crucial role in solving one of the biggest global challenges: producing enough high-quality food for all people, pets and livestock. Helping to do this as efficiently as possible, but also as safely and healthily as possible.

## ISO 9001, ISO 14001 and ISO 45001

The company complies with all legal requirements, commitments and guidelines in the areas of information security, quality, safety, health and environment. To be a reliable partner for all our relationships, the company goes one step further. To make this demonstrable and secure within the organization, Dinnissen has opted for integral certification to ISO 9001 (quality), ISO 14001 (environment), ISO 27001 (information security) and ISO 45001 (health and safety).
