

Treatment of products with high vacuum

Categories : [Chemicals](#), [Measurement, Instrumentation, Control & Automation](#), [Pumps & Compressors](#)

Date : 22. November 2021

A very important Germany fine-chemical company has chosen a 3000 liters Bi-Evolution Dryer (model RB 3000) fully equipped with vacuum pump, condensing unit, H/C unit and control-system by Italvacuum. The Bi-Evolution Dryer is Italvacuum's double cone rotary vacuum dryer that provides high level performances to fulfill the production needs of modern-day firms in the chemical, fine chemical and pharmaceutical industry, amongst many others. It keeps up with today's increasingly stringent safety regulations, such as Atex, FDA, Asme, cGMP, Ehedg, CE, Ex.

Italvacuum can provide turnkey installation; the company offers every necessary component for a flawless production process, from vacuum pumps and H/C units together with the control-system. Furthermore the company is also able to serve and support costumers on an international scale in different stages of projects: before the choice thanks to high skilled engineer and the possibility of pilot test in house or off site and during the phase of installation/ after sales thanks to highly specialized staff that can provide scheduled preventive maintenance or prompt technical assistance.
